The Power of Blue[®].

Infinite Voltage Control with Wire Feed Speed Tracking provides a broader operating range with finer control by automatically increasing or decreasing wire feed speed when voltage is adjusted.

Durable cast aluminum feedhead incorporates dual groove quickchange drive roll and spring-loaded tension arm with calibrated tension knob all designed to make set up easier and faster.

Miller's exclusive "Tip Saver" short circuit protection shuts down output when tip is shorted to the work. Extends contact tip life and protects internal components from damage. Trigger reset permits quick reset at torch rather than unit.

Easy access to output studs provides convenient polarity changeover when changing from solid or flux cored wires.

Self-resetting motor protection circuit rather than fuses to find and replace.

Thermal overload protection shuts down unit and activates over temperature light if airflow is blocked or duty cycle is exceeded. Automatically resets when fault is corrected and unit cools.

New!

- Factory-installed contactor and gas solenoid valve
 Information/settings chart
- Note: Shielding gas and safety equipment not included.

Standard built-in solid state contactor circuit makes wire electrically "cold" until trigger is pulled. Makes the unit safer, and is easier to position torch to work before starting weld.

Uses 4 or 8 in (102 or 203 mm) spools and can be set up to weld with wire sizes .024-.030 in (0.6-0.8 mm) mild/stainless steel and .030-.035 in (0.8-0.9 mm) flux cored.

Add the Spoolmate[™] 3035 spool gun and SGA spool gun adapter for welding with .030 in (0.8 mm) aluminum wire on 14 gauge to 1/8 in material.
